

England Squash Environmental Statement

Here at England Squash, we take our environmental responsibilities seriously, all aspects of our operations have been evaluated from transportation and energy usage, down to single-use plastics and stationery.

We are committed to looking for new ways to reduce our carbon footprint and reliance on single-use plastics, whether that means refining our processes, using more environmentally friendly suppliers or investing in less wasteful technology.

We will review our environmental impact periodically and set targets to reduce carbon emissions.

Fuel consumption for transportation is kept to a minimum through use of public transport and technology. We limit non-vital journeys and we invest in carbon offsetting programmes to mitigate against the impact of all essential travel.

Electricity consumption is kept to a minimum wherever possible.

Reducing waste production is important and we are constantly refining our operating practices. Where waste is unavoidable, we recycle: all letterheads and stationery are printed on recycled paper, all waste paper, cardboard, and plastic is recycled and use of single-use plastics is avoided wherever possible.

We encourage all our employees to play an active role in achieving our environmental goals, not only in their day-to-day actions, but also with long-term ideas and suggestions.

We encourage partners and suppliers to consider their environmental impact and advise on how they can reduce their environmental impact.
